

Vandad Delavari

Canadian Permanent Resident | vandad1901@gmail.com | github.com/vandad1901

Profile

Backend Engineer specializing in distributed systems, gRPC services, and enterprise-grade Go backend systems

Skills

Languages: Go, Python, TypeScript, C/C++, SQL, HTML, CSS

Frontend: Angular, React, Next.js, Tailwind CSS

Backend: Go, Django, REST APIs, gRPC

Databases: PostgreSQL, MongoDB, Redis

Tools & Platforms: Git, Docker, Linux, CI/CD, Node.js

Testing: Integration Testing, BDD, Gherkin, Godog

Concepts: Distributed Systems, System Design, Database Design, API Design, Software Architecture

Experience

AI Data Annotator, DataAnnotation – Remote Apr 2026 – Present

- Evaluated and ranked AI model outputs across diverse tasks, assessing correctness, reasoning quality, and instruction adherence
- Performed error analysis and fact-checking to identify hallucinations, logical inconsistencies, and code failures
- Reviewed code generation tasks, providing structured feedback used in LLM training and evaluation pipelines

Full-Stack Developer, System Group (Enterprise Software Company) – Tehran, IR Jan 2025 – Mar 2026

- Delivered 10+ production modules for a greenfield enterprise software suite serving large organizations across HCM, financial, and operational domains
- Designed gRPC service boundaries, protobuf contracts, and backend services in Go, translating HR and payroll requirements into scalable domain models
- Developed core HCM systems including staff management workflows, payroll calculation engines, and accounting ledger-entry generation used in production
- Designed relational database schemas and optimized PostgreSQL queries to support evolving enterprise data and usage patterns
- Led frontend development of 8+ Angular features, building complex form-driven workflows and reusable UI components
- Established a behavior-driven testing framework using Gherkin and Godog, later adopted across multiple teams, and built internal tooling including a DBF validation utility for legacy integrations

Projects

Aknoon Gallery Website GitHub, Demo

- Full-stack Next.js/TypeScript app with authentication, admin dashboard, and multi-criteria search (filters, ranges, hierarchical categories)
- Designed reusable frontend architecture for scalable, maintainable component-based UI

P2P Chat Application GitHub

- Peer-to-peer chat system in Python/PyQt with direct client-to-client messaging (no central server)
- Redis-based peer discovery with STUN NAT traversal for connection establishment

Education

Amirkabir University of Technology – Bachelor of Computer Science Jun 2026

National University Entrance Exam (Konkur): Ranked 251 nationally
